

Online Employment Application Management System

Developed for a local public school district to help administer employment applications. Perspective employees submit applications for Instructional, Substitute and Administrative positions via the Internet. Applicants can also upload documents such as resumes or reference letters. In addition, they can return to update information or new documents whenever they like.

Administrators have an Intranet site to manage the applications. They can review or print one or many applications in pdf format. The system is also used to capture application ratings and interview notes generated by staff members. When an applicant is hired, all the appropriate data is automatically sent to their HR system via an XML transfer with a click of the button.

Application Search Results for Employment.
